VULTUS

MULTI-FUNCTIONAL TOOL CARRIER

1.1 Development

The multi-functional tool carriers by LACRUZ® are pre-arranged for mechanical and hydraulic accessories and they are conceived for the maintenance of the soil in the inter-row through a mechanical working of the soil with respect to the plant. Developed on a steel structure, it is a perfect combination of sturdiness and easy handling and it is conceived to grant the best performance also in difficult working conditions, such as steep slopes and heavy soils.

The tool is equipped with a hydraulic device, allowing to regulate the work of the accessories and an automatic cooling system.

The independent hydraulic system offers the possibility to use this device also with tractors with a reduced oil flow, avoiding problems of flow rate and overheating. Height, width and grade are then regulated by a joystick and they allow to adapt the machine to different working needs.

The development of this machine arises from the necessity of reducing the use of chemical products for the management of the weeds in the soil, and also of optimizing the costs and working time. The hydraulic system of the tool works also with oil of vegetal origin.

The versatility of this multi-functional tool carriers by LACRUZ® is given also by the possibility of choosing the single or double version, front or rear mounting, with cardan shaft onboard or rear lifted with direct pump.

LACRUZ® offers also a wide range of accessories to cope with the several soil conditions, equipped with double-effect sensor arms for a better control and higher precision in use.

TRIDER

MECHANICAL STUMP ERADICATOR

4.1 Development

The mechanical stump eradicator by LACRUZ® is a tool conceived to work with tracked or wheeled tractors. The system works through a mechanical transmission and allows the total removal of roots in row plantations such as vineyard, orchards, poplars and others.

Thanks to the motion of the tractor, harrows and blades cut portions of the soil, oscillating bars and rotors help extracting the stumps and separating the dirt from roots, that are left on the ground behind the machine.

Soon after the passage of the stump eradicator, the soil is practically ready for new cultivations and the roots left clean on the ground can be easily collected and brought to recycling and biomass plants. The removal of stumps and roots which is usually an expensive but necessary operation, becomes in this way an easier, faster and more cost effective work, especially in comparison with the traditional methods of plant extraction.

LACRUZ® has developed 4 models of stump eradicators, varying according to the working width, diameters of the stumps and depth of the roots to be removed.
